## Bolt Torque

DIAMETER (mm)	5mm	6mm	8mm	10mm	12mm
NEWTON-METRES (Nm)	5 Nm	9 Nm	22 Nm	44 Nm	77 Nm

# Let's get to work.

## Prado 150 Installation

1. Locate the sensor arm mounting slot, and remove the nut connecting it to the factory mount.
2. Place the headlight levelling bracket behind the factory mount and thread through the two supplied M6 bolts. Ensure that they are secured through the bolt holes indicated in red.
3. Fasten the bracket to the factory mount using the M6 nuts.
4. Secure the sensor arm to the elongated slot in the headlight levelling bracket, using the factory nut.

**Please note:** the factory washer has a small tab to stop the thread spinning in place, ensure this tab sits on the outside of the headlight levelling bracket as pictured.

5. The sensor arm has a small indicator that lines up with a corresponding indicator on the sensor itself. Make sure these align and tighten all bolts to the recommended torque settings.
6. That's it, you're done!

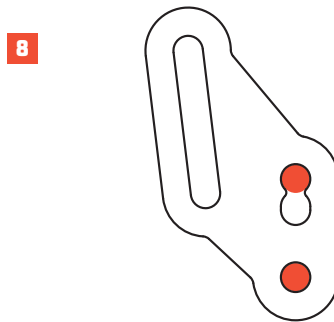

## LC200 Installation

7. Locate the sensor arm mounting slot, and remove the nut connecting it to the factory mount.
8. Position the headlight levelling bracket in front of the factory mount and thread through the two supplied M6 bolts. Ensure that they are secured through the bolt holes indicated in red.
9. Fasten the bracket to the factory mount using the M6 nuts.
10. Secure the sensor arm to the elongated slot in the headlight levelling bracket, using the factory nut.

**Please note:** the factory washer has a small tab to stop the thread spinning in place, ensure this tab sits on the outside of the headlight levelling bracket as pictured.

11. The sensor arm has a small indicator that lines up with a corresponding indicator on the sensor itself. Make sure these align and tighten all bolts to the recommended torque settings.
12. That's it, you're done!

## LC300 Installation

13. Locate the sensor arm mounting slot, and remove the nut connecting it to the factory mount.
14. Position the headlight levelling bracket in front of the factory mount and thread through the two supplied M6 bolts. Ensure that they are secured through the bolt holes indicated in red.
15. Fasten the bracket to the factory mount using the M6 nuts.
16. Secure the sensor arm to the elongated slot in the headlight levelling bracket, using the factory nut.

**Please note:** the factory washer has a small tab to stop the thread spinning in place, ensure this tab sits on the outside of the headlight levelling bracket as pictured.

17. The sensor arm has a small indicator that lines up with a corresponding indicator on the sensor itself. Make sure these align and tighten all bolts to the recommended torque settings.
18. That's it, you're done!

## **Local Knowledge & Assistance**

We know half the fun of building your dream 4x4 is getting your hands dirty. But we also know that sometimes, things don't go to plan. If in the pursuit to build the ultimate setup you find yourself off-track, we're here to help you get unstuck.
